EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Claim 11, line 15 replace "polylatic" with "polylactic"

Claim 11, line 16 replace "Montmorillonite" with "montmorillonite"

Art Unit: 1796

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Claims 11 and 15-19 are allowed over the closest references cited below.

The present invention is drawn to a process for controlling strain hardening properties of a polymer comprising blending a polymer and nanoparticles to produce a polymeric composition, quenching the polymeric composition at a temperature below the glass transition temperature of the polymer to yield an amorphous polymeric composition, forming a film from the amorphous polymeric composition, and subjecting the film to strain hardening in a rubber state by stretching the film at a temperature between the glass transition temperature and the cold crystallization temperature, wherein the nanoparticles are present in an amount of between 0.01 % and 10 % by volume based upon the volume of polymer in order to reduce the true strain at which the film formed from the polymeric composition undergoes strain hardening, and wherein the steps of quenching the polymeric composition and the step of forming the film are interchangeable, and wherein the polymer is selected from polystyrene or polylactic acid, and the nanoparticles are selected from nanoclays and substituted montmorillonite.

Qian *et al.* (U.S. 6,407,155) discloses forming a nanocomposite of polymer and nanoparticle, forming a film from the composition, and subjecting the film to biaxial stretching of polymer film to induce strain hardening. Preferred nanoparticles are phyllosilicate (montmorillonite) clay. A suitable thermoplastic polymer for use in the invention is polystyrene, inter alia. The reference does not teach use of polylactic acid. Furthermore, Qian *et al.* does not teach or make obvious a process of strain hardening under the conditions set forth in instant claims.

Kobayashi *et al.* (U.S. 6,139,948) teaches a process comprising blending polylactic acid and silica, extruding the melt mix, quenching said melt mix on a casting roll to obtain unstretched film, and stretching the film in the machine direction at 60 °, followed by stretching in the tranverse direction at 70 °C. Kobayashi *et al.* does not teach or make obvious a process of strain hardening under the conditions set forth in instant claims.

Art Unit: 1796

Yamada *et al.* (JP 2003-363393) teaches a strain hardened composition comprising poly(lactic acid) and montmorillonite clay. The does not teach or make obvious a process of strain hardening under the conditions set forth in instant claims.

Prior art made of record but not relied upon is considered pertinent to the Applicant's disclosure. The following reference has been cited to show the state of the art with respect to formation of polylactic acid film.

Grüber *et al.* (U.S. 5,536,807) teaches preparation of semi-crystalline film of polylactic acid. Inventors examine the role of nucleating agents on rates of crystallization and teach self-induced strain hardening of polylactic acid. Grüber *et al.* does not teach or make obvious a process of strain hardening under the conditions set forth in instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
